

# Sprout Snaps

optional front elastic

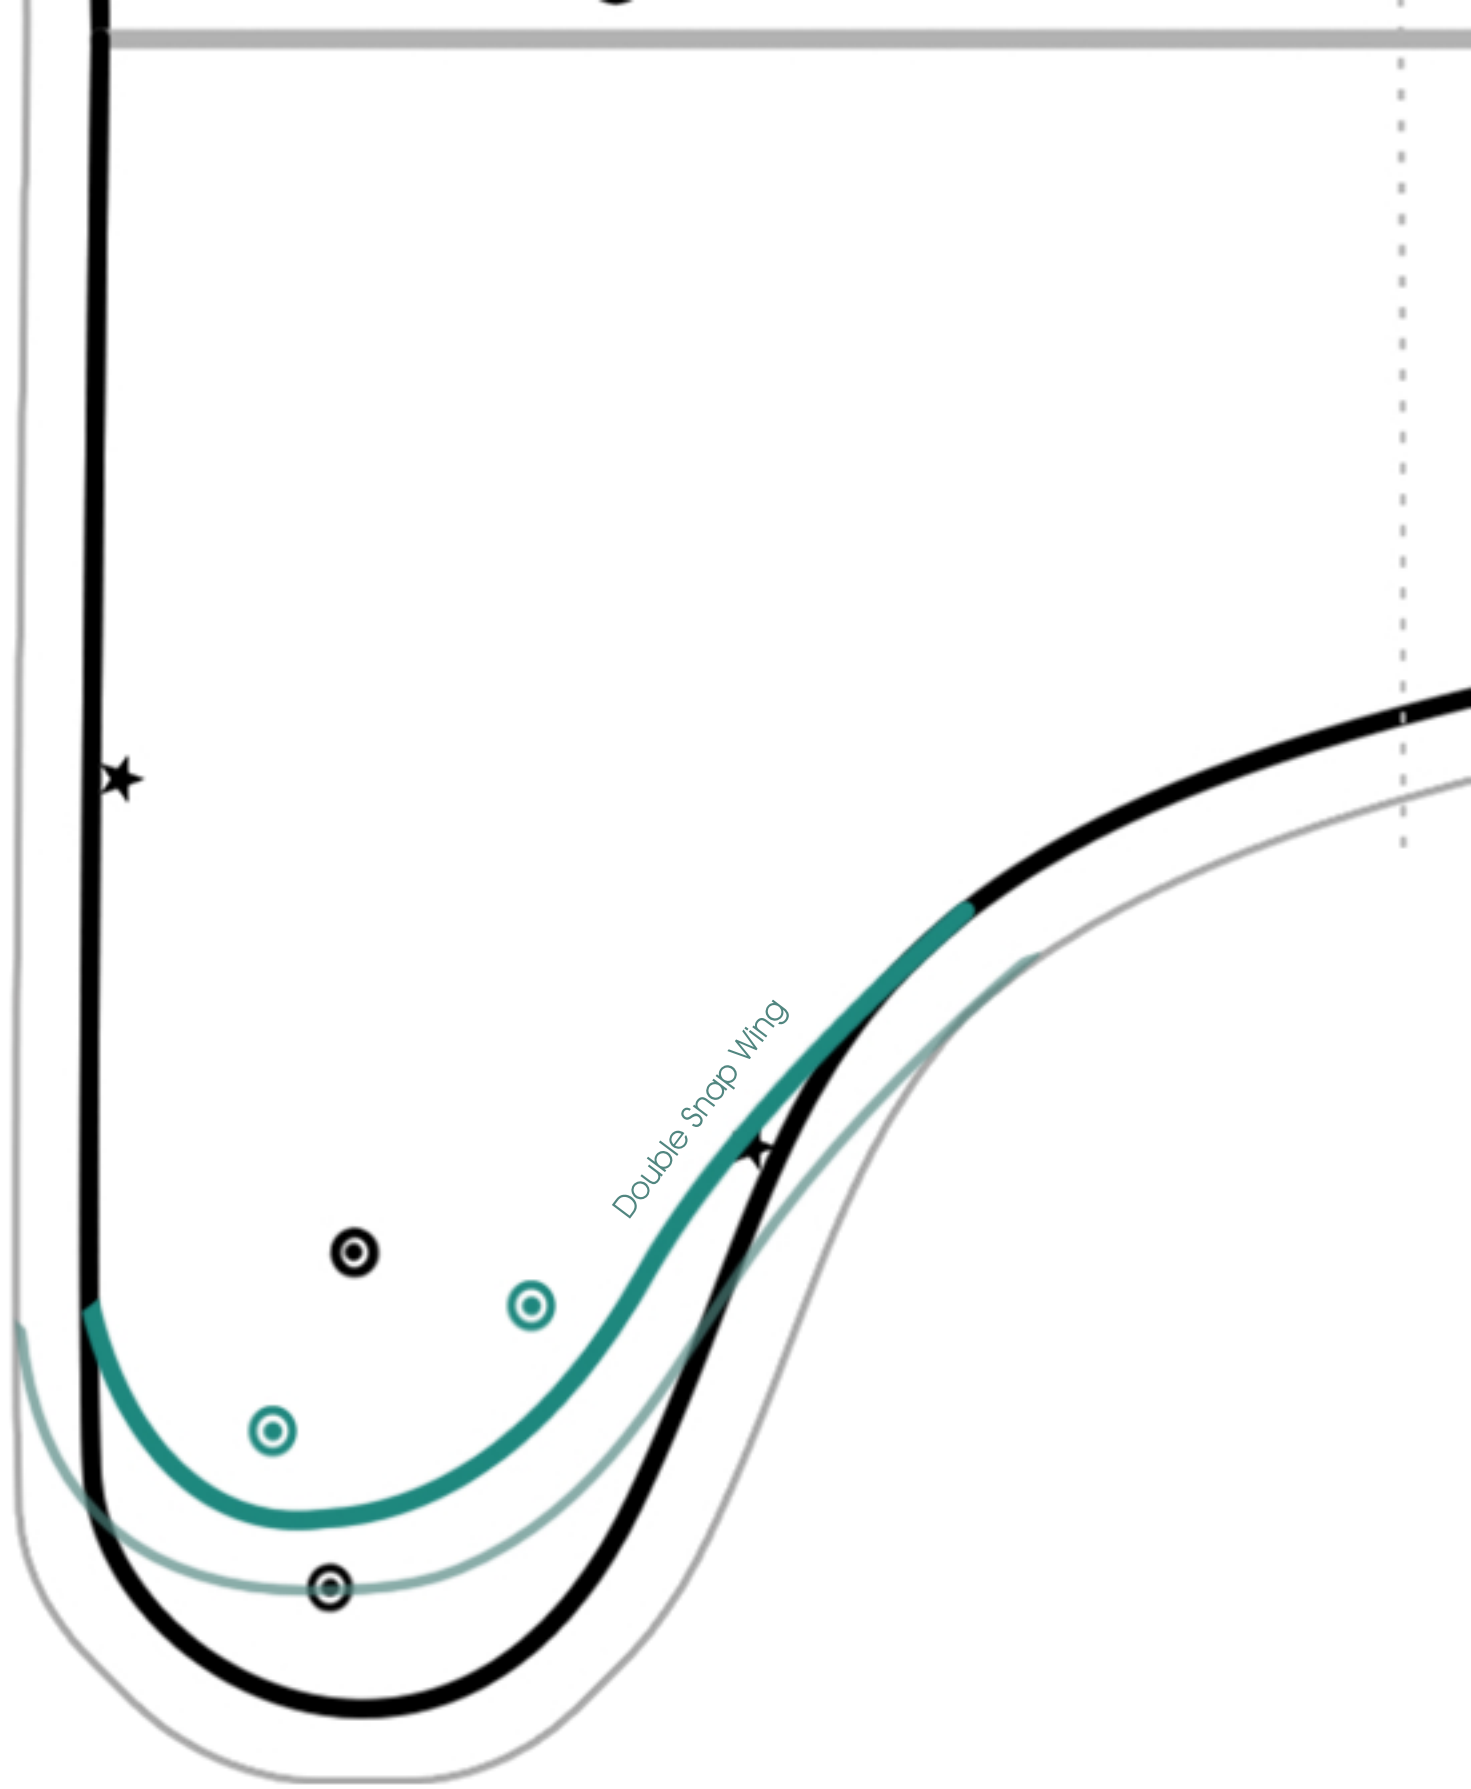

optional front elastic

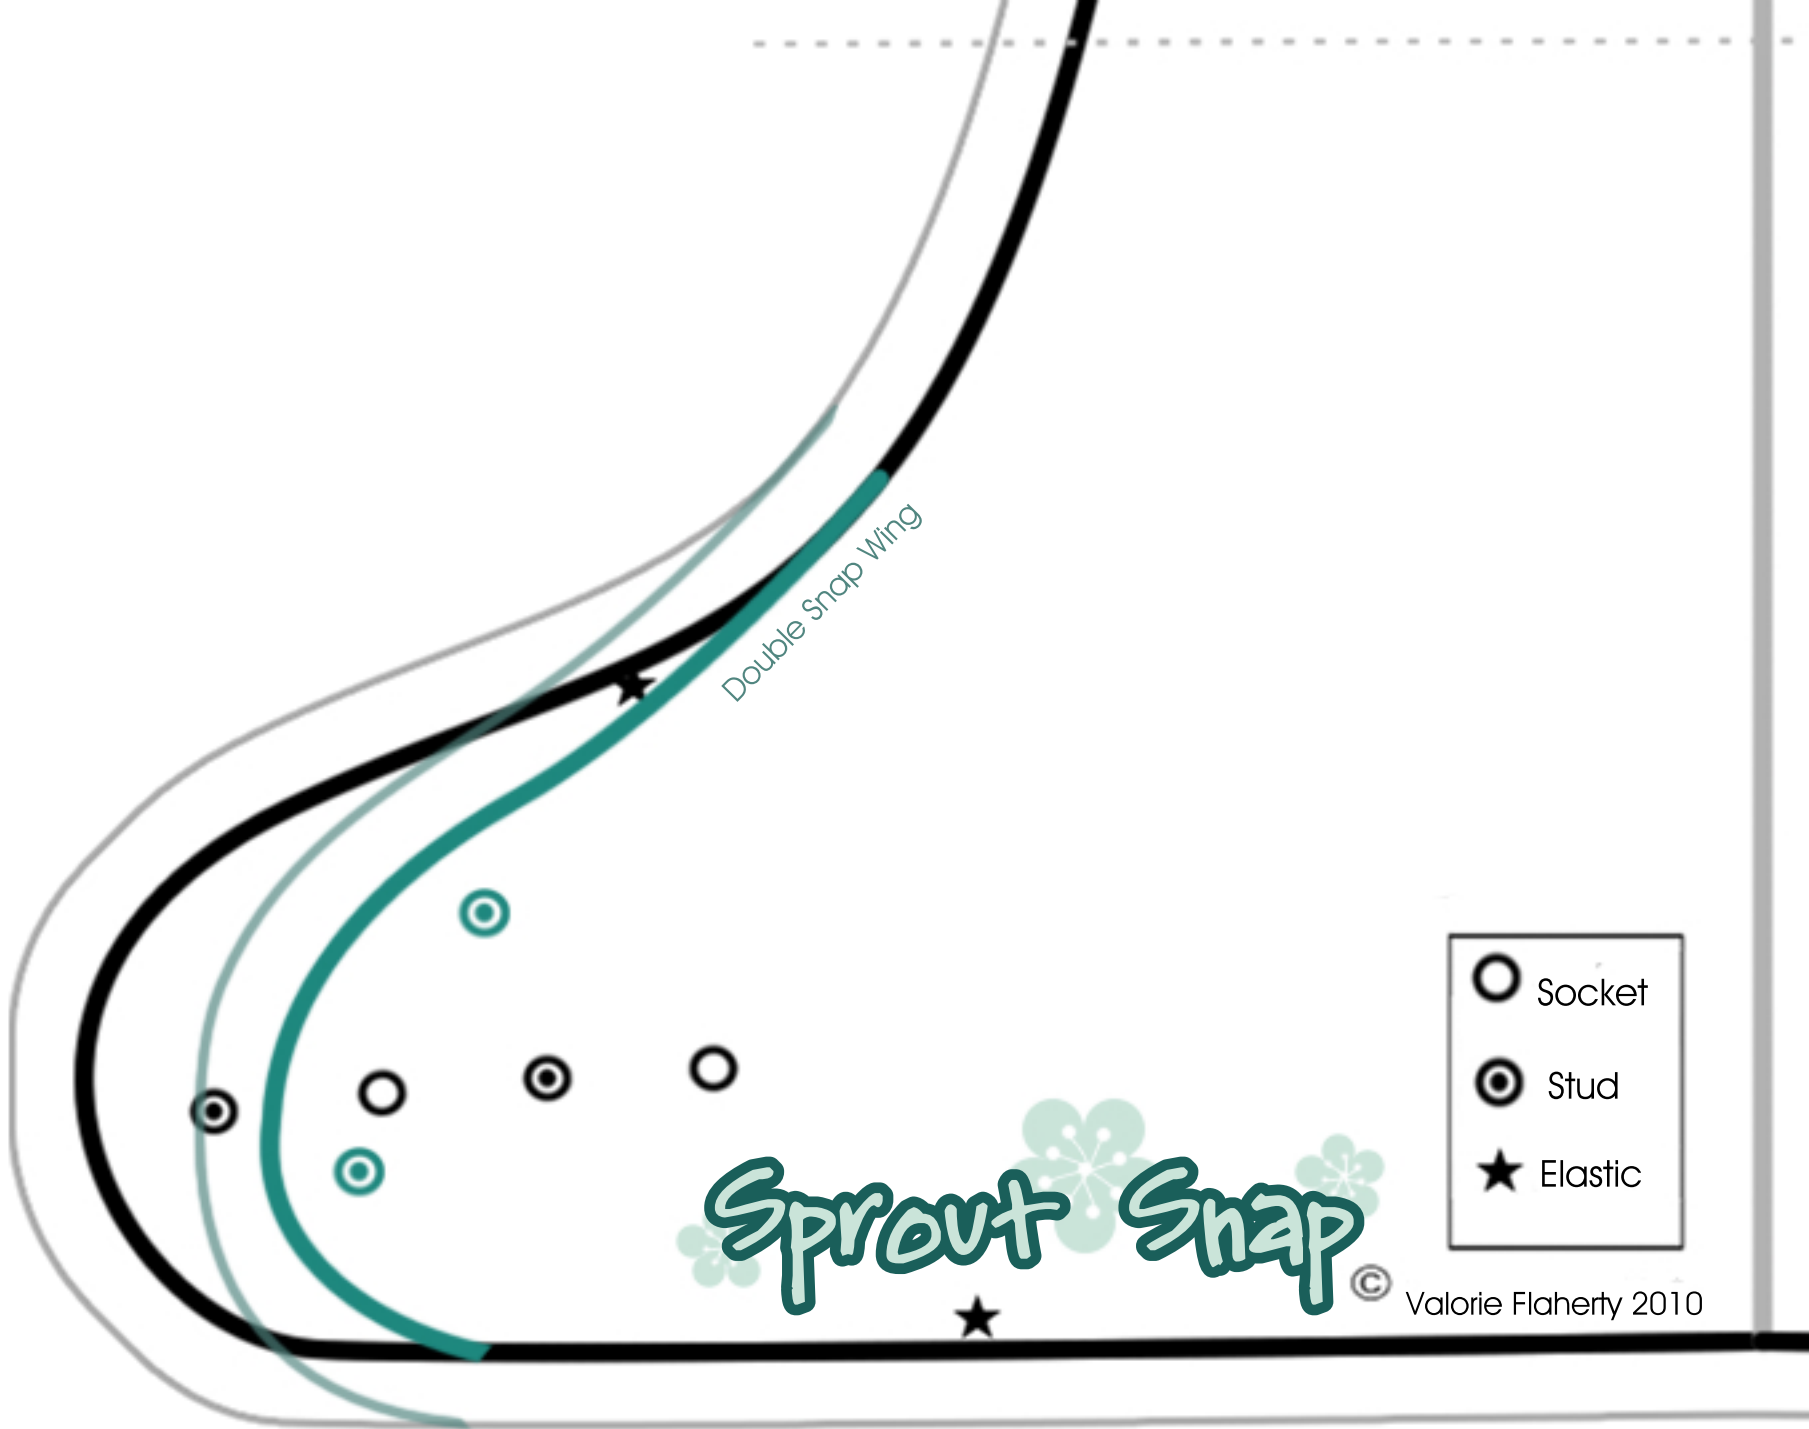

1 in.

The diagram illustrates the waistband area of a garment, split vertically by a central line. On the left side, a thick black curved line represents the waistband edge, with a thin grey line just inside it. A dashed horizontal line is at the top, and another dashed horizontal line is at the bottom. On the right side, a similar thick black curved line represents the waistband edge, with a thin grey line just inside it. A dashed horizontal line is at the top, and another dashed horizontal line is at the bottom. In the center, there are two vertical columns of circles. The left column has three circles: the top one is a simple white circle with a black outline, the middle one is a white circle with a black outline and a black dot in the center, and the bottom one is a white circle with a black outline and a black dot in the center. A grey arrow points from the text to the middle circle. The right column has two circles: the top one is a simple white circle with a black outline, and the bottom one is a white circle with a black outline and a black dot in the center.

Stud of rise settings  
can snap into waist  
sockets to create the  
NB/Sm rise setting.

note the sm. rise snap  
has been lowered to  
make room for double row

## double row snap template

If you like the adjustability of two rows of waist snaps, you can use the double snap template for marking your snaps.
